## OPBNB BLOCKCHAIN

### Unleash BNB Chain's Full Potential with Multi Gain

An optimized layer-2 solution that delivers lower fees and higher throughput to unlock the full potential of the **BNB Binance Smart Chain**.

#### • **BNB TOKEN**

BNB, originally known as Binance Coin, is the native cryptocurrency of the Binance ecosystem, encompassing the Binance cryptocurrency exchange and the BNB Chain blockchain network. Launched in July 2017 through an Initial Coin Offering (ICO), BNB was initially issued as an ERC-20 token on the Ethereum blockchain. In 2019, it transitioned to become the native coin of Binance's own blockchain, the BNB Chain.

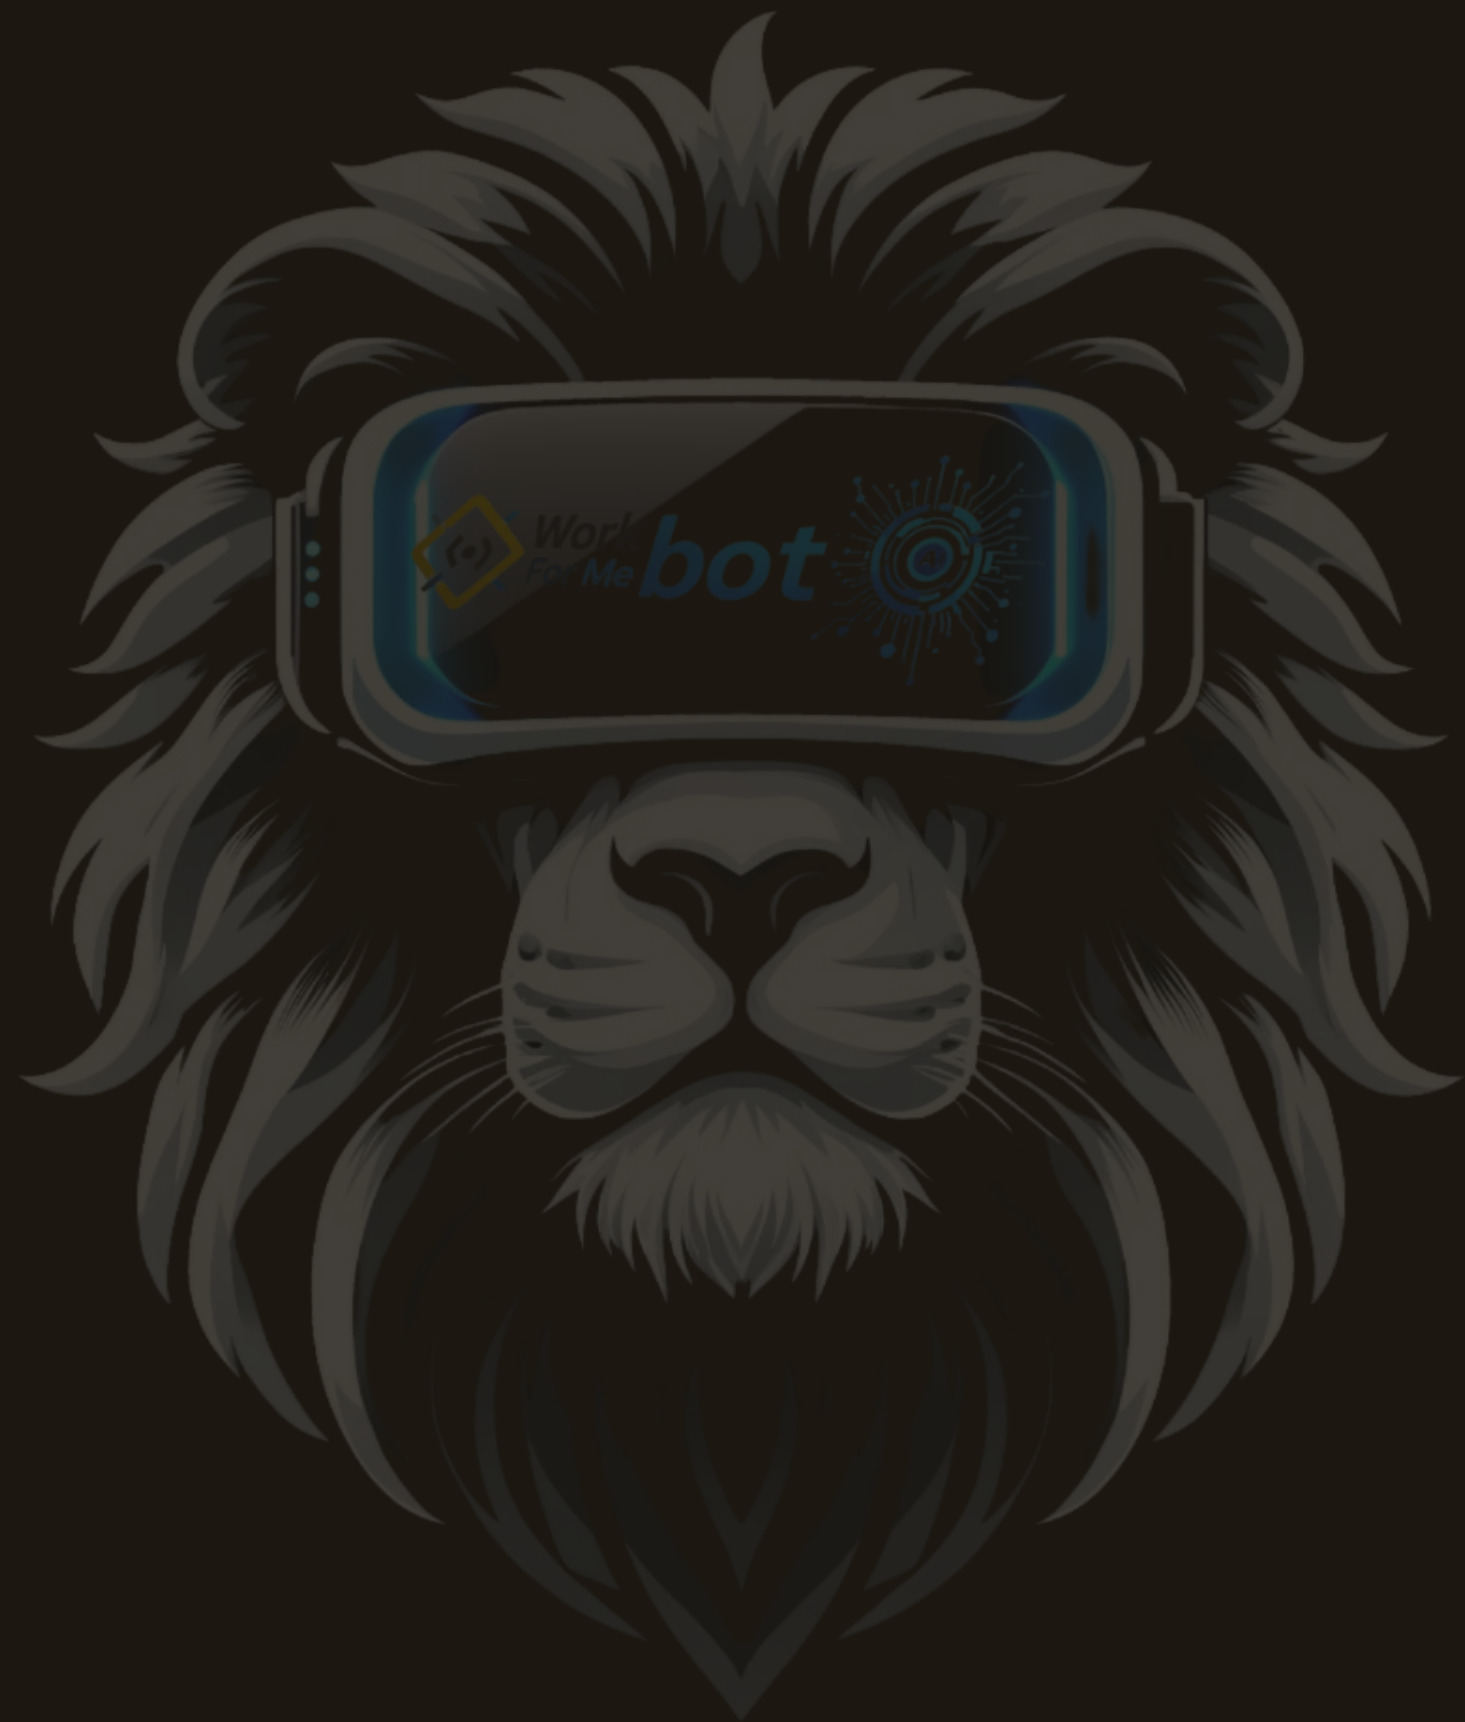

#### • **USDT TETHER**

Tether (USDT) is a stablecoin cryptocurrency pegged 1:1 to the U.S. dollar, designed to maintain a stable value. Launched in 2014 by Tether Limited, USDT facilitates digital transactions without the volatility typical of other cryptocurrencies. It operates across multiple blockchains, including Bitcoin, Ethereum, and opBNB, enabling seamless transfers between platforms. USDT is widely used for trading, remittances, and as a hedge against market fluctuations.

[multi-gain.pro](https://multi-gain.pro)

**OPBNB DUAL MATRIX**

## SMART CONTRACTS

# DECENTRALIZED TRANSPARENT SAFE & SECURE

Smart contracts are self-executing programs on blockchains that automatically enforce agreements when predefined conditions are met, eliminating intermediaries and enhancing transaction efficiency and security.

## WHAT IS MULTI GAIN?

### WHAT MAKES MULTI GAIN SO SPECIAL

- Multi-Gain operates on the Binance **opBNB** blockchain, using a decentralized smart contract to empower financial independence. It offers ways to earn in BNB and USDT: **60% direct** referral commissions in USDT, **90% instant payouts in BNB**, **100% Team Income** in BNB, 10% auto-pool rewards, 10% team royal salary distributed monthly up to 20 levels, and 20% team income in USDT. 10 Level Upgrades generate secure, transparent, automated income with Multi Gain.

**Multi-Gain is a decentralized smart contract that runs on the Binance opBNB blockchain and aims to help millions of people become independent through the power of cryptocurrency.**

## DUAL MATRIX INCOME

### DIRECT INCOME

Multi-Gain offers a dual-income structure, paying 90% in BNB for direct income and 60% in USDT for referrals. Here's how it works:

**Direct Income in BNB (90%):** When you invite someone using your referral link, 90% of their upgrade is instantly credited to your wallet in BNB. This high percentage ensures significant earnings for active referrers, promoting rapid team growth.

**Referral Income in USDT (60%):** For every direct referral, 60% of the package value is distributed in USDT, ensuring a stable and universally accepted income.

This structure combines the growth potential of BNB with the stability of USDT.

### TEAM INCOME

Multi-Gain distributes team income to incentivize network growth, paying 100% in BNB and 20% in USDT across four levels below you:

**Team Income in BNB (100%):** For each upgrade within your team across 4 levels, 25% of the value is distributed in BNB. This is divided equally, with 25% for each level, ensuring a steady stream of cryptocurrency income from team activity.

**Team Income in USDT (20%):** Similarly, 20% of the package value from team upgrade is paid out in USDT. Each level receives 5%, providing a stable and reliable income stream.

This hybrid payout model balances crypto growth and stability.

## BENEFITS & FEATURES

### GLOBAL FINANCIAL OPPORTUNITY

Multi-Gain is a global opportunity because it leverages decentralized blockchain technology, enabling anyone worldwide to earn securely and transparently. With versatile earning streams in BNB and USDT, it empowers individuals to grow wealth regardless of location. Its smart contract ensures fairness, autonomy, and scalability, fostering financial independence globally.

### LOWER TRANSACTION COSTS

opBNB offers ultra-low transaction fees, making it cost-effective for users. It processes transactions swiftly, with high scalability and speeds up to 4,000 TPS, ensuring seamless and efficient operations.

### TRANSPARENCY AND SECURITY

Transparency in Multi-Gain is ensured by smart contracts on the blockchain, providing immutable and public records. Security is reinforced through decentralized technology, safeguarding assets and eliminating third-party risks.

### UNLIMITED INCOME POTENTIAL

Multi-Gain ensures instant pay with automated smart contracts, directly crediting earnings to wallets. Its unlimited income potential comes from scalable referral rewards, team income, and monthly salaries across multiple levels.

## STABLE PLATFORM

## PRIVACY & SECURITY SCAM FREE // PEER TO PEER

Peer-to-peer platforms like Multi-Gain are unstoppable due to decentralized blockchain technology, eliminating intermediaries, ensuring transparency, and fostering trust. Autonomous smart contracts enable global accessibility and tamper-proof operations, empowering users worldwide.

- **VOLATILITY AND MARKET RISKS**

USDT helps members lock in profits by maintaining a stable value tied to the US dollar. This stability protects earnings from cryptocurrency market volatility, ensuring consistent and reliable financial growth.

- **BNB OPPORTUNITY FOR GROWTH**

BNB offers upside investment potential through its role in the Binance ecosystem, increasing demand, and utility. Its limited supply and growing adoption drive value appreciation, enhancing wealth-building opportunities.

What is special about Bitcoin?

Every four years, an event called the 'Bitcoin Halving' takes place. This event cuts in half the number of new Bitcoins miners receive for adding transactions to the blockchain. The next Bitcoin Halving is predicted to occur on April 27, 2024. The previous Bitcoin Halving occurred on May 11, 2020 at a price of ~\$9,500. Historically the Bitcoin price tend to go up after Bitcoin Halvings.

Bitcoin is the first cryptocurrency, it was created in 2009 after the global financial crisis by someone using the alias Satoshi Nakamoto. Bitcoin secures transactions on its network using Secure Hash Algorithm (SHA) 256 proof of work.

What is special about BNB?

Binance Coin (BNB) and its integration with Binance Chain (now part of BNB Chain) and the Binance Exchange play a significant role in the Binance ecosystem. Initially launched in 2017, BNB was created to offer utility within the Binance cryptocurrency exchange, primarily to provide users with a means to pay for trading fees at a discounted rate. Over time, BNB's utility has expanded beyond just fee payment to encompass a wide range of applications within and outside the Binance platform?.

BNB Chain, previously known as Binance Chain and Binance Smart Chain (BSC), is a dual-chain architecture that aims to empower users to build decentralized applications (DApps) and digital assets on the blockchain. The BNB Chain is a dual-chain architecture that aims to empower users to build decentralized applications (DApps) and digital assets on the blockchain. The BNB Chain is a dual-chain architecture that aims to empower users to build decentralized applications (DApps) and digital assets on the blockchain.

What is special about XRP?

The XRP Ledger (XRPL) is a decentralized, public blockchain led by a global developer community.

XRPL uses a consensus protocol, in which designated servers called validators come to an agreement on the order and outcome of XRP transactions every 3-5 seconds. XRP processes transactions faster than most other blockchain protocols. Unlike a Proof of Work protocol, the XRP Ledger's consensus protocol requires far less processing making it one of the "greenest" blockchains.

The cryptocurrency community has been closely monitoring the outcome regarding the reparations Ripple is required to pay over its institutional sales of XRP.
